

## SolarOz SFJ-600 Flue Jacket

The flue jacket is a simple piece of engineering with no moving parts. It works on the principal of cold water is dense & sinks & hot water is lighter & rises. This takes place as the heat from the wood fire passes through the flue it heats the water in the jacket & the natural process of thermosyphon starts. **Note** the Flue is only to be connected to an open vented tank. Under NO circumstances pressurize the Flue Jacket.

Diameter	150mm
Height	600mm
Connections	3/4 bsp
Material	304SS

*SolarOz wood fire boost options are available when no wetback is fitted to your stove or heater*
